

green plug is the developer of **green talk™** - a secure, digital protocol for realtime collaboration between devices that need power and power sources. We sell component technologies that make power supplies more efficient and universal.

- ✓ Our technology allows a single power supply to power and charge multiple devices simultaneously, each with unique voltage and current requirements.
- ✓ We've developed a universal connector that extends the interoperability enjoyed by low-power devices for devices up to 24V.
- ✓ **green plug™-enabled power hubs are a new category of power supplies that save energy while lowering green house gasses and eliminating waste from disposing device-specific power supplies.**

Over two and a half billion devices including laptops, printers, speakers, routers, modems, cell phones, entertainment devices, power tools, cameras and so many other portable electronic devices require a power source that converts 65V – 240V wall power to device-specific DC power. All such devices currently provide an individualized interface to transform the power from the form it is delivered to the home or office into the DC voltage and current levels they need. Manufacturing separate interfaces is quite costly as well as extremely inconvenient to the consumer. And, doing so contributes highly to **wasted resources, green house gasses, pollution and refuse.**

In addition to providing significant eco-friendly benefits, **green plug™** also enables power supplies to add an unlimited number of device monitoring and control functions not possible without collaboration between the power supply and the device. Power supplies can be stylish and provide for energy optimization and reporting. Manufacturers no longer compete on price; their **green plug™-enabled products compete on innovation and style.**

Come see the future of convenient and efficient energy charging systems today!

Make an appointment today to visit our suite where you can view this new technology, meet our team & understand more about what **green plug can offer your company. We look forward to meeting with you!**

green plug™ at CES
Platinum Hotel and Spa, Las Vegas
211 E. Flamingo Road
Las Vegas, NV 89109
(702) 365-5000

For directions & information:
Call (970) 461-3077
 (complimentary limo pickup)
 Please ask for: Frank Paniagua, Jr., Paul Panepinto or Seth Socolow

green plug™ is available for meetings from Sunday, January 6th at 1:00PM Until 3:00PM January 10th.

Address: 239 Main Street, Suite E, Pleasanton, CA 94566
